

Region: Arequipa

Region Capital: Arequipa
 Region Area: 68,662 km²

Arequipa is one of twenty-five regions in Peru. Located in southern coastal Peru, Arequipa, the region capital, is an important colonial city with a rich natural and cultural heritage. Extraction of oil, gas and minerals are the predominate economic activities in the region, followed by service industries and manufacturing. As of 2015, the region’s population was estimated at 1,287,205; with the highest percentage of its population residing in the provinces of Arequipa, Camana and Caylloma. Relative to the rest of Peru, the population of Arequipa has higher than average life expectancy (76.3 years) and access to improved water sources (92.4%), while also having lower than average poverty (9.1%) and illiteracy (4.6%).

Multi-Hazard Risk (MHR) ¹

Score = 0.451, Rank = 16 of 25

Of the twenty-five regions of Peru, Arequipa ranks 16th in multi-hazard risk (MHR = 0.451). Table 1 outlines the individual components that contribute to risk. As shown in the bar chart of Figure 1, Arequipa’s low multi-hazard risk is a function of its very high risk multi-hazard exposure (MHE = 0.738), very low vulnerability (V = 0.336), and very high coping capacity (CC = 0.721). The ternary graph at right shows that Arequipa’s multi-hazard exposure is higher than the national average, however, this exposure is countered by lower vulnerability and higher capacity to cope.

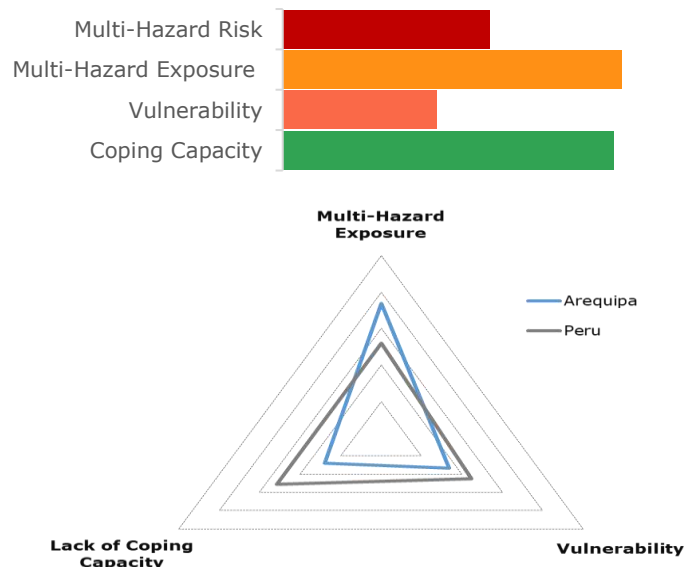

Figure 1. Components of the Multi-Hazard Risk Score compared to the national average.

¹ **Multi-Hazard Risk (MHR)**: An index that measures the likelihood of losses or disruptions to a region’s normal function due to interaction between multi-hazard exposure, socioeconomic vulnerability and coping capacity. **MHR** = (MHE + V + (1-CC))/3. Values range from 0-1.

Components of Multi-Hazard Risk (MHR) ²

Table 1. Scores and ranks for each component of the Multi-Hazard Risk Score.

Multi-Hazard Exposure (MHE)		Vulnerability (V)		Coping Capacity (CC)	
Very High		Very Low		Very High	
Score	Rank (of 25)	Score	Rank (of 25)	Score	Rank (of 25)
0.738	5	0.336	24	0.721	2

Multi-Hazard Exposure (MHE) ³

Score = 0.738, Rank = 5 of 25

Arequipa has very high multi-hazard exposure relative to other regions of Peru (MHE = 0.738). This score is a function of both Raw and Relative MHE, as shown in Figure 2. The Raw MHE Score is an index reflecting the absolute value of population exposed to multiple hazards. This score can aid in understanding the overall scale of hazard exposure. The Relative MHE Score is an index reflecting the proportion of the region’s base population exposed. This score can assist in the determination of how important hazards are, and can help prioritize disaster management activities across regions. Estimates of exposure by hazard type are summarized in Table 2.

Table 2. Estimated ambient population⁴ exposed to each hazard type.

Figure 2. Average, raw and relative Multi-Hazard Exposure Scores.

² $MHR = (MHE + V + (1-CC))/3$.

³ **Multi Hazard Exposure (MHE)**: An index based on the estimated average exposure of the population to six hazard types: tsunamis, landslides, extreme temperature, earthquakes (MMI VII and above), floods and volcanos. Average exposure considers both raw average exposure and relative average exposure as a proportion of total population. Values range from 0-1.

⁴ **Ambient Population**: 24-hour average estimate of the population; typically differs from census population.

Vulnerability (V) ⁵

Score = 0.336, Rank = 24 of 25

Arequipa has very low vulnerability relative to other Peruvian regions (V = 0.336). The bar chart on the right displays the composition of its overall Vulnerability Score. As shown, vulnerability in Arequipa is driven primarily by population pressures, recent disaster impacts, and environmental stress. The table below summarizes the individual indicators within each socio-economic theme.

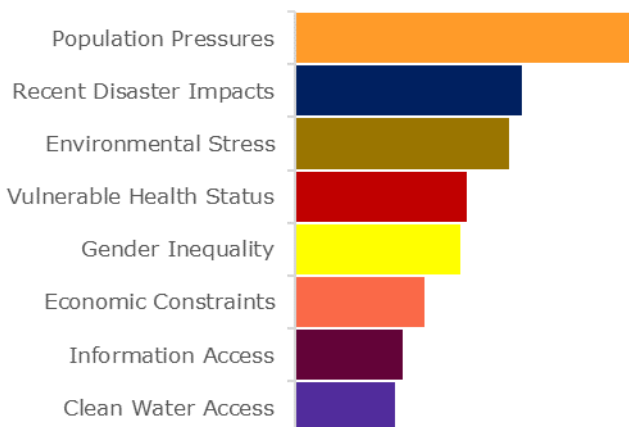

Figure 3. Components of the Vulnerability Score by relative contribution.

Table 3. Indicators of vulnerability grouped by theme.

	Environmental Stress	1.9 % of total regional area with irrigation-fed agriculture	9.2 % of total regional area with severe erosion				
	Vulnerable Health Status	13.3 Infant mortality rate per 1k births	36.6 Maternal deaths per 100k births	76.3 Average life expectancy (years) at birth	8.7 % of children under 5 years of age that are malnourished	6.6 % of population with 1 or more disability	
	Clean Water Vulnerability	92.4 % households with access to improved water	73.6 % households with access to flush toilets				
	Information Access Vulnerability	4.6 % of population 15yrs and older that are illiterate	10.6 Average years of schooling	78.8 % primary school enrollment	28.9 % households with internet	92.5 % households with television	87.0 % households with radio
	Economic Constraints	0.48 Ratio of dependents to working age population (15-64 years)	54.51 Ratio of average monthly household expenses to income	9.1 % of population monetarily impoverished			
	Gender Inequality	0.50 Proportion of female representatives in local government	0.84 Ratio of female to male secondary enrollment	0.80 Ratio of female to male labor participation			

⁵ **Vulnerability (V)**: An index that measures the socioeconomic conditions associated with susceptibility to disruptions in a region's normal functions. Values range from 0-1.

Population Pressures

1.1
% Average annual population change (2010-2015)

Recent Disaster Impacts

345.0
Average annual hazard-related deaths per 10k persons (2010-2014)

3.3
Average annual number of homes destroyed by recent hazards per 10k persons (2010-2014)

Coping Capacity (CC) ⁶

Score = 0.721, Rank = 2 of 25

Arequipa has a very high coping capacity relative to other regions (CC = 0.721). The bar chart on the right displays the composition of its overall Coping Capacity Score. As shown, coping capacity in Arequipa is hindered primarily by its environmental and infrastructure capacity. The table below summarizes the individual indicators within each socio-economic theme.

Figure 4. Components of the Coping Capacity Score by relative contribution.

Table 4. Indicators of coping capacity grouped by theme.

Economic Capacity

\$1,429
Average monthly income (\$)

\$22,032
Gross domestic product per capita

Governance

2.92
Registered cases of sexual violence per 10k persons

0.32
Registered cases of missing persons per 10k persons

0.004
Average annual number of social conflicts per 10k persons (active and resolved)

7,833
of voters per 10k persons (2014 election)

Environmental Capacity

13.3
% protected or reforested land

⁶ **Coping Capacity (CC)**: An index that measures the systems, means and abilities of a region to absorb and respond to events that could potentially disrupt normal function. Values range from 0-1.

Infrastructure Capacity

	Healthcare Capacity	16.8 # of hospital beds per 10k persons	42.8 # of nurses per 10k persons	38.8 # of physicians per 10k persons
	Communications Capacity	27.8 % households with fixed phone line	91.2 % households with mobile phone	
	Transportation Capacity	1.9 Port/airport density per 10,000 sq km	1,234.0 Road/rail density per 10,000 sq km	

Resilience (R) ⁷

Score = 0.693, Rank = 3 of 25

Resilience is a function of both vulnerability and coping capacity. Arequipa is more resilient than the national average, and its very high Resilience Score (R = 0.693) is due to its very low vulnerability and very high coping capacity. The region’s baseline indicators suggest a focus for resilience-building efforts. In Arequipa, the thematic areas with the weakest relative scores are summarized in the table below. Readers can additionally consult Appendix 1 for a comprehensive assessment of its need for specific program types relative to other regions.

Table 5. The top 3 thematic areas with the weakest relative scores.

Population Pressures

Recent Disaster Impacts

Transportation Capacity

⁷ **Resilience (R):** An index that offers a hazard-independent measure of current socio-economic conditions affecting the short-term ability to absorb, respond to, and recover from disruptions to a region’s normal function. Values range from 0-1.
