PDC's Advanced Technology Ecosystem

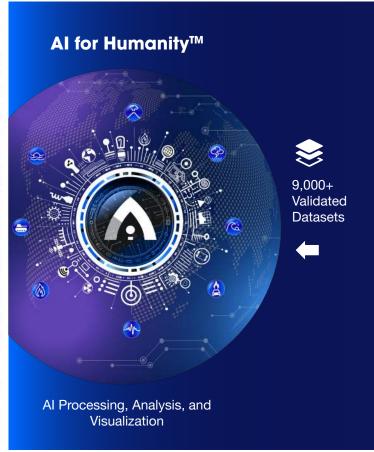

PDC Technology Overview

DisasterAWARE is the backbone of Pacific Disaster Center's (PDC's) technology ecosystem, powering integrated situational awareness solutions around the globe. The technology is built on an open system architecture to meet the unique demands of public and private sectors. The flexibility, scalability, and security offered by DisasterAWARE® is trusted by tens of thousands of decision-makers, analysts, and senior leaders worldwide for early warning, advanced risk analysis, training and exercises, and coordination of response operations.

Our Decision Advantage

- Λ
- **Al-Enabled Insights:** PDC's vertically integrated Al for HumanityTM technologies help derive novel insights from pattern identification, unusual relationships, and complex trends at a scale and speed never before possible.
- **Trusted Data:** Now more than ever, in operating environments where misinformation and disinformation are widespread, authenticated and verified data is essential.
- Global Scale: Provides reliable, real-time hazard information for 29 types of natural and human-induced events taking place around the world.

- High-Powered Modeling and Analytics: Visualizes complex, scientific data, translating it into quantifiable impacts to populations, critical assets, and more.
- Highly Secure: PDC recognizes the critical importance of protecting sensitive data. Its cybersecurity framework aligns with NIST and ISO/IEC standards, as well as AICPA SOC 2 Trust Services Criteria and other risk management framework protocols under FISMA, FIPS 140-2 and DFARS.

DisasterAWARE Pro®

disasteraware.pdc.org

The #1 award-winning early warning and risk intelligence platform trusted by disaster managers worldwide.

DisasterAWARE Pro is a specialized software solution built on PDC's core DisasterAWARE technology backbone. The system is designed for disaster management professionals as well as partner nation capacity enhancement—enabling effective decision making and disaster management independence. DisasterAWARE Pro transforms real-time hazard data into actionable insights within minutes, providing Al-augmented hazard information and advanced analytics to anticipate, prepare for, and respond to the complete spectrum of global hazards with precision, speed, and confidence. DisasterAWARE Pro supports information sharing, risk analysis, and a unified, multi-agency approach to disaster response, planning, and preparedness.

Supply Chain & Critical Asset Risk Management

Supply Chain Risk Management

Multinational Exercises

U.S. Government

RAPIDS

Providing actionable risk intelligence and information sharing for readiness, disaster response, and strategic support functions, RAPIDS serves as a core element for integrated situational awareness among U.S. government stakeholders.

Indonesia

InAWARE

InAWARE is Indonesia's national early warning system powered by DisasterAWARE and developed in collaboration with PDC. The system integrates national-level data about hazards and risks and facilitates improved coordination and planning among the archipelago's widely dispersed regional operations centers.

ASEAN

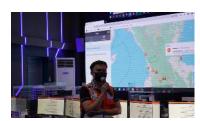

DMRS

The ASEAN Coordinating Centre for Humanitarian Assistance on Disaster Management (AHA Centre)'s Disaster Monitoring and Response System (DMRS) was developed in partnership between PDC and ASEAN. The system is powered by DisasterAWARE and supports 10 ASEAN nations.

Philippines

PhilAWARE

PDC and the Philippines collaborated on the development of the nation's first national early warning and situational awareness platform, PhilAWARE. The system is powered by DisasterAWARE and has been nationally institutionalized into the country's legal framework for disaster management.

International Atomic Energy Agency

The International Atomic Energy Agency (IAEA), and PDC developed a customized alerting and real-time reporting system to notify IAEA about nuclear facilities and assets exposed to natural and human-induced hazards happening around the globe.

Balkans Region

Five nations within the Balkans have recently adopted DisasterAWARE technology for use in their national disaster management efforts, with further plans for custom solutions on the horizon.
